

Nursing Support Services & Seizure Care in Schools

Seizure Management

NSS no longer assigns delegated nursing responsibilities to school staff. These plans are managed at the school level. **As such, EAs or others providing seizure management support are no longer eligible for the EA3 stipend.**

EA3 stipends are not provided where plans are developed with families. These plans provide school teams key information in terms of caring for a student but are not assigned under the delegation of a nurse (which is a formal way of the nurse assigning duties under the authority of their nursing license).

Please work closely with the student's parents to develop a [Seizure Action Plan and Medical Alert Form](#), the template is available on the NSS webpage. Please encourage families to obtain updated information from their family doctor to help inform this process. You may also wish to share a copy of the [Information For Parents](#) that has been provided by the Ministry to explain this change.

It is still possible to request training if the student is using one of the specific medications listed on the NSS form, although the number of nurses in our area is limited, so it is necessary to develop a plan between yourselves and the parent, rather than waiting for the nurse. This training can be requested using the [Training Request Form](#).

There is additional information under the "[Learn about seizure care in the school setting](#)" tab on the NSS page.

Prior to requesting training, you are asked to develop the action plan, and to ask the parents to confirm some information. This Training request form also includes a pre-training checklist for staff.
